

# *Addition To Subtraction From 100*

Place 10 counters at random on the 100s board, one per row.

## Rules of game

- The game is played in pairs.
- The winner is the player who can remove the most number of counters from the board.
- You may only subtract or add single digit numbers.

## Subtraction

- Place a counter of a different colour from the ten already on the board, on the number 100.
- Player one subtracts a single digit number. If they land on a number with a counter on, they remove the counter and keep it. For example if there is a counter on 93 they might go  $100 - 7 = 93$ .
- Player two subtracts a number, again trying to land on the next counter.
- Keep taking turns until all counters are removed.

## Addition

- Played as above starting at the number 1 and adding single digit numbers.

***The winner is the person with the most counters at the end***
